Our company

METALOUMIN SA is among the 1st aluminum extrusion industries in Greece established at 1969, producing its own standardized series of domestic and industrial aluminium profiles for doors & windows and special profiles tailor made to customer's specifications (ladders, fixtures, green-houses e.t.c.).

It is situated 25 km from the center of Athens, occupying a space of 23.000 m² where it operates its production line that includes:

- Press with annual capacity at 5.000 tons
- Horizontal unit of electrostatic powder coating with 2 tubes that allow dyeing white and other colors simultaneously (RAL, MAT, hyper-resistant colors)
- Unit for special wood effects (sublichromy)
- Unit for special treatments/ manufacturing

Since 2009, Metaloumin has specialized and is highly active in the manufacturing of aluminium mounting structures with fixed or adjustable tilt in fields, industrial roofs and domestic installations (flat and tiled roofs).

Metaloumin has completed works in excess of 350 MW throughout Greece and abroad, 120 MW of which account for domestic installations.

The mounting structures are applied to any kind of panel (crystalline or thin-film), their production is vertically integrated and are accompanied with stainless steel (INOX) accessories of premium quality.

For mounting installations distancing less than 3km from the sea-shore, high quality anodization is provided for extra corrosion resistance. Additionally, the company manufactures and installs off-grid photovoltaic structures with strong presence in several countries of sub-Saharan Africa

- Realizes special studies for projects of particular requirements (industrial roofs, solar car parkings e.t.c.)
- Disposes preassembled kits of 3kW, 5kW και 10kW for flat or tiled roofs.

The mounting systems have been studied and are statically certified by TUV.

Warranty of 25 years and CE declaration of conformity are provided.

Additionally, the company manufactures and installs off-grid photovoltaic structures with strong presence in several countries of sub-Saharan Africa.

[Our presence](#)

It is worth mentioning that the EVROPLUS aluminium systems of METALOUMIN have been used for the construction of the largest Olympic Projects in Athens in 2004. Furthermore, our products had been used for the construction of 1,750 (70%) of the 2.500 residences of the Olympic village.

The company's exports are mainly focused in the markets of U.K., Germany, Romania, Cyprus, Malta, Belgium, Slovakia and Czech Republic.

Operates subsidiaries in Zambia, Tanzania and Ethiopia. It has designed systems particularly for the prevailing conditions in those countries.
